**FEED LICKS FOR
DAIRY, BEEF, SHEEP,
DEER AND GOATS**

FORAGE PLUS

COMPLEMENTARY FEED SUPPLEMENT
FOR CATTLE, GOATS AND THEIR
YOUNGSTOCK.

P14

ORGANYX EXTRA

ORGANIC FEED FOR CATTLE
AND GOATS.

P18

PRE-CALVER

FOR DAIRY AND BEEF COWS.

P16

EASY BREATHER

NATURAL AID FOR MAINTAINING A HEALTHY
RESPIRATORY SYSTEM IN CALVES,
YOUNG CATTLE AND SHEEP.

P22

EXTRA HIGH ENERGY

FOR EWES, GROWING LAMBS,
RAMS AND GOATS ALL YEAR ROUND.

P20

FORAGE PLUS

FOR DEER ALL YEAR ROUND.

P24

Our Research

Crystalyx products benefit from years of scientific research at some of the finest agricultural institutes around the world, with results consistently showing significant improvements in animal health, performance and productivity.

With a scientific approach to animal nutrition, Crystalyx continues to invest heavily in research, ensuring that each product specifically fits the requirements of both modern and traditional farming systems.

Research at Newcastle University and Kansas State University on rumen fermentation forms the foundations of Crystalyx products. Results conclusively show that feeding Crystalyx, stimulates the rumen making the rumen bugs work harder and ever more efficiently. This improvement in rumen activity allows livestock

to consume more forage by up to **15%** and digest what they do eat more efficiently - by as much as **10%**. The increase in consumption and more efficient digestion of home grown forages allow animals to perform at their very best, by means of improving DLWG, enhancing fertility and increasing milk yield.

Research conducted at Aberystwyth University has also confirmed that the improved animal performance when Crystalyx is fed, leads to a significant reduction in methane output per kilogram of liveweight gain, of almost **20%**. The Aberystwyth research team further concluded, that based on their trial results, all youngstock fed Crystalyx Forage Plus at grass would reach bulling weight approximately six weeks earlier than control heifers on grass alone - further reducing their lifetime methane emissions.

Independent research carried out by UniServices, University of Auckland, has shown that supplementing cows with Crystalyx Pre-Calver will significantly reduce the instances of milk fever, retained cleansings and mastitis.

An AgResearch study with R2 Dairy Heifers has shown that feeding Crystalyx Forage Plus can improve pregnancy rates and lead to earlier conception when compared to livestock grazing on grass alone. While trials with Crystalyx Extra High Energy have confirmed significantly improved lamb survival rates when triplet bearing ewes are supplemented in the weeks pre and post lambing.

Our Research Partners

Features and Benefits

■ LOW MOISTURE

Crystalyx is very low in moisture, typically it contains only 2-3% water. Most dried feedstuffs contain around 10% and traditional chemical blocks can contain in excess of 20% moisture. Water dilutes nutrients and is very expensive to transport.

■ HARD CRYSTALLINE STRUCTURE

Crystalyx products don't break up in wet weather. The design of the product means that water can not penetrate the surface (as is the case with chemical blocks), only the top few millimetres of Crystalyx blocks softens as moisture ingresses from the atmosphere, allowing livestock to lick the product.

■ CAN ONLY BE LICKED

The hard, durable consistency of Crystalyx means that animals cannot gorge on the product. Instead intakes are consistent, with the product being consumed little and often as designed.

■ DRAMATICALLY INCREASES SALIVA FLOW

Saliva is a natural buffer (10% sodium Bicarbonate) and will help offset problems associated with acidic forages.

■ HIGH IN FERMENTABLE ENERGY

Crystalyx Products contain as much as 43% sugar which helps to increase the speed and rate of rumen fermentation. Most bucket supplements contain around 18% sugar, which is similar to good quality grass, therefore does not improve fermentation rate.

■ DOES NOT DISPLACE OTHER FEEDS

Feeding Crystalyx increases fermentation efficiency and speed, meaning that animals supplemented with Crystalyx increase their forage intake. This is in contrast to other supplements that can simply displace other feeds.

■ SUITABLE FOR GRASS FED ANIMALS

Crystalyx can be fed to a variety of grass fed animals such as cattle, sheep, goats, deer, reindeer, alpacas, buffalo, bison and even elephants.

■ NO FILLERS

No chemicals or fibre are added to aid cohesion.

■ CONCENTRATED ENERGY SOURCE

Contains more energy than many other feed/mineral blocks.

■ IMPROVED FEED INTAKE AND DIGESTION

Crystalyx improves ruminant rumen activity allowing livestock to consume more forage by up to 15%, and digest what they do eat more efficiently by as much as 10%.

■ VERY PALATABLE

Animals love it - even shy feeders readily consume Crystalyx.

■ FULL MINERAL PACKAGE

Crystalyx products contain protein, vitamins, minerals and trace elements, meaning there is little need to offer any other supplements (unless specific clinical deficiency exists).

■ ECONOMIC

The relatively low required intake means that Crystalyx products cost less per day than many other feed/mineral blocks.

■ RESEARCH PROVEN

Crystalyx blocks are backed up by scientific research from all over the world, with research continually showing significant improvements in animal health, performance, fertility and productivity.

Why Feed Crystalyx?

Crystalyx supplies a high energy form of supplementation to the main forage diets of dairy, beef, sheep, goats, and deer in a very palatable form.

The confidence in Crystalyx products comes from the extensive research that has been carried out over the last 25 years. Crystalyx has been trialled at some of the finest agricultural institutes in the world, such as Kansas State University, Newcastle University, University of Hannover, Aberystwyth University and AgResearch to name but a few. It is this independent research that give credibility to the benefits of Crystalyx, and allows livestock farmers to put their trust in Crystalyx products.

The success of Crystalyx blocks now means that they are sold in over 20 countries around the world, and give supplementation to the diets of

tens of millions of livestock across the globe. It is the unique manufacturing process Crystalyx uses that allows for such a high quality product to be created. The process involves driving moisture out of the molasses over an extended period of time, allowing a naturally formed, hard low moisture product to be produced.

Crystalyx blocks are packed full of energy, protein, trace elements, minerals and vitamins, with the required intake often being less than half that of other blocks on the market. The relatively low required intakes means that Crystalyx blocks can last up to twice as long as other blocks. Crystalyx feed blocks are a convenient way of providing supplementation to livestock 24 hours a day.

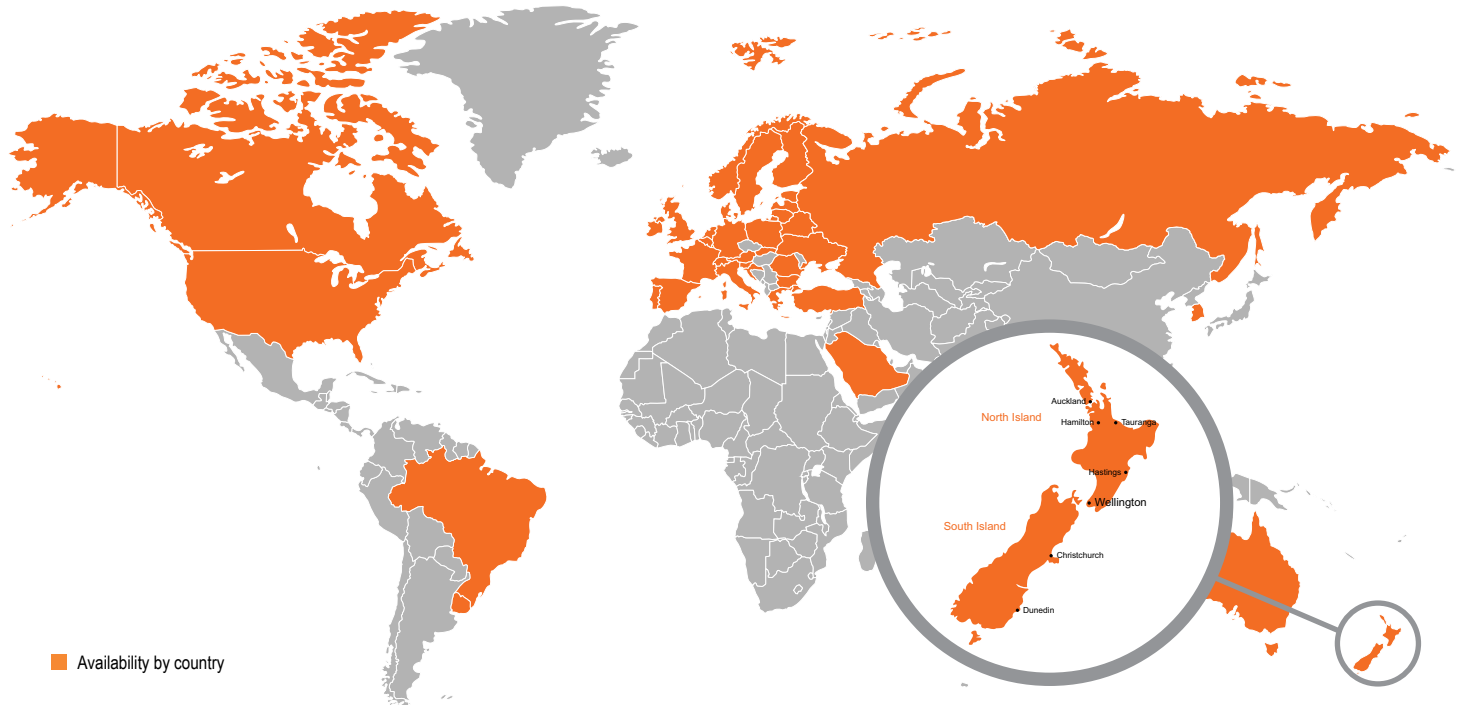

The product is licked little and often, constantly supplementing the animal and stimulating the rumen bugs, making the best of home-grown

forages and balancing forage deficiencies.

At Crystalyx we are confident that our product range gives livestock the opportunity to perform at their very best and in turn offer significant financial rewards to livestock farmers.

Crystalyx Worldwide

Introduction

Whats in Crystalyx?

■ DEHYDRATED MOLASSES

Provides a very palatable and available form of energy which allows the rumen flora to utilise the nutritional value of forages at optimum levels. This increases the intake of dry matter and its digestibility when supplementing forage diets.

■ VEGETABLE OIL

A high quality and palatable feed material which passes through the rumen to be digested and used directly by the animal. Vegetable oil provides the most concentrated form of energy of any feed material available - up to 3.5 times that found in cereals.

■ PROTEIN

The Crystalyx range contains differing levels of protein dependant on the role of the product in the overall diet. The forms used are urea for the optimum utilisation of fibre in the rumination process as well as prairie meal. The products formulated for organic farming do not contain any added protein sources.

■ MINERALS

All Crystalyx blocks include highly available forms of magnesium, phosphorus and calcium incorporated at optimum levels to enhance animal performance, meaning additional supplementation should not be needed.

■ TRACE ELEMENTS

Essential trace elements are included at new improved levels in the Crystalyx range, with copper being included in the main Cattle products.

■ VITAMINS

The essential Vitamins A, D3 and E are included to balance forage variability in all non-organic products.

Crystalyx blocks are dehydrated feed licks containing a unique mix of:

A Crystalyx block split in half showing the homogenized blend of ingredients contained within.

Crystalyx for Cattle

Optimises performance by stimulating forage intakes and digestibility while providing all essential mineral, trace elements and vitamins

Improves animal health and fertility, increasing pregnancy rates in heifers

Increases DLWG by up to 36% allowing heifers to reach bulling weight earlier

Reduce the risk of acidosis by stimulating saliva production to help maintain a stable rumen pH

Helps buffer wet acidic silages and stimulate silage intakes

Reduces loss of body condition in early lactation to optimise performance and fertility

Forage Plus

Crystalyx Forage Plus is a feed tub ideally suited for use in dairy, beef and deer farming systems, in all cases Forage Plus has been shown (through University research trials) to increase forage intake and digestibility. Trials have concluded that Forage Plus stimulates growth rates and improves overall health, fertility and milk quality in livestock.

Beef Farming: Crystalyx Forage Plus has undergone rigorous trials and research over the last 25 years, with results continually proving that Forage Plus stimulates forage intake and digestion in cattle. Research at Kansas State University has confirmed that Forage Plus increases forage intake by as much as **15%**, and increases digestion by a further **10%**.

The increase in forage intake and digestion has a direct effect on cattle daily live weight gain

(DLWG), with a **25%** increase being noted in trials at Newcastle University. In the vast majority of trials done, Forage Plus has more than doubled the investment by extra growth performance. i.e. for every **\$1** spent on the product, at least a **\$2** return was gained.

Dairy Farming: The ability to get the cow in calf and producing milk is of vital importance in any dairy enterprise, Crystalyx Forage Plus contains high levels of selenium and copper which have an important role in improving fertility of dairy cows and breeding bulls. An AgResearch study in New Zealand, with 4 mobs of R2 dairy heifers, recorded a **100%** pregnancy rate in both mobs fed Crystalyx Forage Plus. Control heifer mobs in adjacent paddocks recorded a **95%** pregnancy rate. In a further trial with Rissington Breedline **24%** more R1 bulls passed their semen quality test first time, when given access to Forage Plus.

Feeding Guidelines

Rates:

2x 22.5kg tubs/20 cattle/40 goats.
2x 40kg tubs/40 cattle/80 goats.

Typical intakes:

Growing cattle: 100-200g/day.
Lactating cows: 100-200g/day.
Goats: 20-50g/day.

Always place a minimum of 2 tubs per mob to avoid bullying.

Available in 40kg and 22.5kg tubs.

Crystalux for Cattle

Optimises performance by stimulating forage intakes and digestibility while providing all essential mineral, trace elements and vitamins

Maintains optimum blood magnesium levels to reduce the risk of milk fever and 'slow calvings'

Supports and maintains a strong, healthy immune system

Optimises calf health and vigour (more 'get up and go')

Reduces the risk of difficult calvings and retained placenta

Conditions cows during the dry period to maintain optimum health so they transition more easily into lactation

Pre-Calver

Crystalyx Pre-Calver is perfect for feeding to both dairy and beef cows during the pre-calving period, as it provides a low calcium/high magnesium diet which greatly reduces the risk of milk fever and slow calving. The increased levels of magnesium contained in Crystalyx Pre-Calver helps improve muscle tone. Inadequate levels can lead to slow calving syndrome where calving can be difficult and prolonged.

Pre-Calving: Many cows receive no special attention during this most important period and are often expected to graze pasture in a cleaning up role. For a very small investment in Pre-Calver the forage diet can be supplemented to ensure there are no nutritional deficiencies and help the cow recover to optimum condition prior to calving.

Research studies in NZ, carried out by UniServices, have clearly shown that dairy cows given access to Crystalyx Pre-Calver in the final 8 weeks of pregnancy, had a significantly reduced incidence of milk fever (as low as 1.3%) and other calving issues.

The consistent and significant reduction in mastitis in early lactation, confirms the improved immunity when Pre-Calver is fed.

Research undertaken at the University of Parma has shown that Pre-Calver substantially increases colostrum production, with a **14%** increase in milk yield being recorded over the first **100** days.

Feeding Guidelines

Rates:

2x 22.5kg tubs/20 cattle/40 goats.
2x 40kg tubs/40 cattle/80 goats.

Typical intakes:

200g/cow/day.
Goats: 20-50/day.

Always place a minimum of 2 tubs per mob to avoid bullying.

Available in 40kg and 22.5kg tubs.

Crystalux for Cattle

Optimises performance by stimulating forage intakes and digestibility

Fully approved
100% organic feed

Improves animal health and performance

Does not break up in cold wet conditions

Organyx Extra

Crystalx Organyx Extra is 100% organic and suitable for Beef cattle, Dairy cattle and Goats.

Organic livestock production is intended to "contribute to the equilibrium of agricultural production systems". However, animal welfare must not be jeopardised in organic systems and regulations on organic farming recognise this by stating "in order to provide the basic nutritional requirements of livestock, certain minerals and trace elements may need to be used under well-defined conditions" such as when organic livestock producers can show evidence of mineral and trace element deficiencies in home-grown forages.

Crystalx Organyx Extra is fully BioGro certified and contains both major minerals and added trace elements which is ideal to be fed either in house or at grass. Crystalx Organyx Extra can be fed

all year round and is ideal for flushing goats and cows/heifers during the service period.

Visit crystalx.co.nz/product/crystalx-organyx-extra/ to download the latest copy of our Bio Grow certification.

Feeding Guidelines

Rates:

2x 22.5kg tubs/20 cattle/40 goats.

Typical intakes:

100-200g/cow/day.

40-60g/goat/day.

Always place a minimum of 2 tubs per mob to avoid bullying.

Available in 22.5kg tubs.

Crystalux for Sheep

Optimises performance by stimulating forage intakes and digestibility while providing all essential mineral, trace elements and vitamins

Increases ovulation rates and lamb numbers at scanning

Maintains body condition during pregnancy to maximise lamb vitality and health

Reduces the risk of twin lamb disease (sleepy sickness)

Improves health and performance

Optimises lamb birth weight to produce healthy vigorous lambs

Enhances ewe colostrum and milk production for improved lamb survival and daily live weight gain

Suitable for sheep, cattle, deer goats and alpaca

Extra High Energy

Crystalyx Extra High Energy is a feed tub that can be used all year round to provide supplementation for ewes, rams and lambs. High in protein, energy and with a full complement of minerals, trace elements and vitamins, Extra High Energy and forage can be all you need to operate a highly effective and profitable sheep rearing system.

Flushing and Topping: Crystalyx Extra High Energy has been proven by Newcastle University and Kansas State University to increase forage intake by **15%** and forage digestion by **10%**, the increased intake and digestion is key in ensuring that ewes reach the correct body condition score quickly before mating with the ram. Over fat or thin ewes take longer to come on heat when rams are turned in, and the oestrus period is erratic with fewer eggs shed and are thus more likely to be barren.

Mid Pregnancy Feeding: Should aim to keep ewes in top condition, excessive loss of condition while pregnant will jeopardise placental development and reduce body reserves available for milk production. Trials conducted at Newcastle University found that ewes with access to Crystalyx Extra High Energy maintained better condition than ewes on grass alone, and their lambs subsequently had a **5%** higher growth rate.

Late Pregnancy Nutrition: A study undertaken by UniServices, University of Auckland showed a significant improvement in triplet lamb survival. Ewes that were supplemented with Crystalyx Extra High Energy from 2 weeks before set stocking until tailing recorded an 11% increase in lamb survival to tailing. A second study by SciLactis Ltd, showed a 10% increase in triplet lamb weaning weight when ewes were supplemented with EHE Crystalyx from 2 weeks before set stocking until tailing.

Feeding Guidelines

Rates:

2x 22.5kg tubs/40 sheep.

2x 40kg/80 sheep.

Typical intakes:

20-30g/ewe/day.

10-20g/lamb/day.

Always place a minimum of 2 tubs per mob to avoid bullying.

Available in 40kg and 22.5kg tubs.

Crystalx for Cattle and Sheep

Helps keep airways clear and reduces stress

A natural aid to help reduce coughing and respiratory irritation

Helps calves and sheep regain their appetite after a stress or challenge

A powerful natural aid to help calves and sheep resist respiratory challenges

Reduces the risk of growth checks

Easy Breather

Crystalyx Easy Breather is a feed lick specially designed with the intention to help alleviate stress and respiratory problems in calves and sheep. Respiratory problems in calves and sheep are most prevalent in autumn and winter. Containing menthol and eucalyptus Crystalyx Easy Breather offers a natural aid to maintain a healthy respiratory system.

Calves and sheep, like children, are particularly prone to respiratory problems, as they have not developed any natural immunity to many infectious organisms. The severity of the problems can vary from a mild nasal discharge and coughing to severe pneumonia with some deaths. Crystalyx Easy Breather contains active and proven decongestants to help reduce coughing and respiratory irritation.

With a full complement of vitamins and trace elements, Crystalyx Easy Breather helps develop and maintain a strong healthy immune system.

Highly palatable Crystalyx Easy Breather helps calves and sheep regain their appetite after a stress or challenge. Dry feed intake is stimulated giving stronger more vigorous livestock that are better able to withstand a challenge.

Feeding Guidelines

Rates:

1x 5kg tub/8-10 calves (under 3 mths).
2x 22.5kg tubs/20 older cattle/sheep.

Typical intakes:

5g-10g/lamb/day. 20g-30g/calf/day.
20g-30g/sheep/day. 40g-60g/older calves/day.

Always place a minimum of 2 tubs per mob to avoid bullying.

Available in 22.5kg and 5kg tubs.

Crystalyx for Deer

Optimises performance by stimulating forage intakes and digestibility while providing all essential mineral, trace elements and vitamins

Improves animal health and fertility

Increases Daily Live Weight Gain

Does not break up in cold wet conditions

Forage Plus - Deer

Crystalx Forage Plus is an easy and effective way to enhance rumen function and improve stock health, to ensure deer get the most out of grass.

Deer rely heavily on forages to provide the bulk of their nutrient requirements - but forage alone rarely provides a perfectly balanced diet. A correct balance of minerals, trace elements and vitamins is essential for the optimum health and performance of deer. Crystalx Forage Plus is a dehydrated molasses feed lick that contains energy (12 ME MJ/kgDM), protein, vitamins and minerals to help balance pasture nutrient deficiencies.

Crystalx Forage Plus has been shown to improve forage intake by up to 15% and enhance digestibility by as much as 10% on low quality pastures, which can lead to improved growth rates

and liveweight gain.

Crystalx Forage Plus works by increasing microbial activity in the rumen so deer get more out of their feed, supporting forage digestion, dry matter intake, trace element status, liveweight gain and fertility.

Crystalx Forage Plus is highly palatable and available 24 hours a day, allowing deer to self-feed without the risk of over consumption, making effective nutrient supplementation both convenient and economical.

Feeding Guidelines

Rates:

2x 22.5kg tubs/30 hinds.

2x 40kg tubs/50 hinds.

Typical intakes:

50-100g/deer/day.

Always place a minimum of 2 tubs per mob to avoid bullying.

Available in 40kg and 22.5kg tubs.
